

NAREL ANALYTICAL REQUEST FORM

This form must be completed at least 14 days before sending any samples to NAREL for analysis. The requester is to complete all fields highlighted in **BLUE** and e-mail the form to Cindy White (white.cindy@epa.gov) along with an electronic copy of the project's QA plan and detailed site and project description.

Requester:	Fred Foreman	Request Date:	1/10/2012
Title:	Chief, Technical Services	Office/Region:	Region 3, OASQA
Address	US EPA ESC, 701 Mapes Road, Ft. Meade, MD 20755		
Phone:	410-305-2629	FAX:	410-305-3095

NAREL STANDARD SAMPLE PREPARATION

Liquid samples are checked for pH and adjusted if necessary. Otherwise liquid samples are analyzed as received.

Solid samples are dried and ashed for all analyses except gamma which uses the dried portion. If only gamma and gross alpha and beta analyses are requested, then samples are only dried for analysis. Foreign materials such as rocks, sticks, leaves, etc. are removed before ashing.

Filter preparation is based on filter type, size, and requested analysis. Filters may be analyzed as received or may be dissolved prior to analysis.

NAREL STANDARD QUALITY CONTROL INFORMATION

Standard QC analyses at NAREL are performed on batches of up to 20 samples of similar matrices. The QC analyses include:

Method	Method blank	LCS	Replicates	Matrix spike
Gross α/β for air filters			X	
Gross α/β for water	X	X	X	X
Gross α/β for other matrices	X	X	X	
Gamma-ray spectrometry	X	X	X	
Tritium in water	X	X	X	X
Tritium in other matrices	X	X	X	If there is a chemical separation
Actinides	X	X	X	
Radium-228	X	X	X	X
Strontium	X	X	X	
Iodine-131	X	X	X	
Technetium-99	X	X	X	X
Metals	X	X	X	X
Mercury	X	X	X	X

Note: For analyses requiring duplicate (replicate) and matrix spike analyses, a sufficient amount of sample must be received. The sample-duplicate combination and the sample-matrix spike combination can be performed on two different samples, e.g., one will be split and duplicated, the second will be split and spiked, or on one sample if at least three volumes of sample are received.

NAREL STANDARD TURNAROUND TIMES

Turnaround times are based on the date of receipt of the last sample for the project and are given in weeks.

Method	Solid	Water	Air Filter
Gamma-ray spectrometry	2	2	3
Gross α/β	3	2	3
Tritium	*	4	*
Iodine-131	*	3	*
Strontium	6	5	6
Actinides	6	6	6
Radium-228	6	6	6
Metals	4	4	*
Mercury	4	4	*

NAREL STANDARD DATA REPORTING

The NAREL standard data deliverable includes sample and QC results. Results will be reported as pCi/gdry for solids, pCi/L for liquids, and pCi/m³ for air filters. Results for hazardous waste analyses will be reported as µg/L for liquids and mass/kg for soils. A hard copy of the report will be sent to the requester. (Electronic data deliverables are available upon request.)

NAREL STANDARD SAMPLE DISPOSAL

Samples will be returned to the requester if NAREL cannot arrange for disposal at a minimal cost.

NAREL STANDARD MDCs & RLs

Standard MDCs and reporting limits are listed in the tables below. MDCs and Reporting Limits depend on a number of variables including sample size, counting times, instrument backgrounds, matrix interferences, dilutions, etc. The actual MDC and Reporting Limit for each sample will be different from those listed below based on each of these variables.

RADIOCHEMICAL MDCs

Analytical Protocol Specification
(APS)

Please complete the APS for any project specific requirements where the NAREL standards listed above do not meet those required by the project's QA plan. More than one APS may be necessary to cover all requirements. NAREL will respond if requirements cannot be met by offering alternatives to the requirements which will be described on an Analytical Protocol Specification Alternate Proposal (APSAP) form and attached to the Project Acceptance Form (PAF.). The PAF and any APSAP forms will be sent to the requester for signatures indicating acceptance of the data delivery dates and any proposed alternatives.

NAREL SAMPLE SHIPMENT GUIDELINES

This document provides guidance in the shipment of environmental samples to NAREL for radiochemical and/or hazardous chemical analyses.

All shipments must comply with the requirements of current DOT regulations. Refer to the DOT Hazardous Materials Regulations contained in Title 49 CFR Subtitle B, Chapter 1, Subchapter C, Parts 171 through 180.

Before collecting samples please refer to the attached table for requested sample sizes, containers and preservatives. For matrices not listed contact the NAREL Analytical Services Coordinator at (334)270-7052.

Before shipping samples, notify the NAREL Analytical Services Coordinator at (334)270-7052 and arrange for sample receipt and subsequent sample return 6 months after results have been reported.

When packing samples for shipment:

- Seal individual samples in plastic bags, preferably ziplock bags.
- Use the correct amount of absorbent material for the volume present. Approved absorbent materials include vermiculite and cat litter.
- The temperature of samples requiring refrigeration during transport MUST be maintained at or below 6°C.
- Ice in a sealed plastic bag or reusable ice substitute freeze packs are acceptable cooling media.
- Chain of Custody forms MUST be sealed in a large ziplock bag and taped to the inside of the cooler lid.

After samples are packed for shipment, secure the cooler with tape and attach a custody seal across the seam of the cooler lid.

All samples MUST be shipped overnight to arrive Monday through Friday. No deliveries are accepted on weekends or Federal holidays.

Send all samples to:
